Subject index

Acidity, porewater estimates 325
Adenine tracer use 314
Aeolian sediment transport 12
Amino acid fluxes 155–7
Ammonium ions
  isotopic signature 257
  porewater concentration 325
Anoxic sediments 29–31
Anthropogenic metals *see* metal pollutants
Antimony emissions 243
ATP
  concentration 318–20
  labelling 314
Authigenesis 7

Bacteria, pelagic role of
  carbon demand 157–8
  DOC–POC transition 155–7
  introduction 152
  particle flux 158–9
  POC 152–4
  role in food webs 227, 230–2, 236–40
  spectral attenuation 162–3
  surface reactivity 159–62
Barium emissions 342
Basin characteristics
  dimensions 4, 8–9
  environments 31–2
  generation 5
  sedimentation 18–19
Bathymetric characteristics 39–43, 336, 337
Biogenic sediment sources 12
Biomass, production estimates 325–8

^{14}C and photosynthesis 128–32
Caesium isotope studies 357
  sediment 369, 372, 373, 385–9
  water 361, 363, 364, 377–8
Calcium carbonate sediment sources 13, 24–5
CalCOFI surveys 118
California Continental Borderland
  cross section 14
  defined 3
California Current 39
Carbon flow
  bacterial 157–8
  concentration studies 321
    dissolved 266–72
    particulate 272–6
    sedimentary 25, 276–7, 282–3
  flux rate 177–8, 181–4
    results
      depth factors 294–5
      geochemistry 295–302
    results discussed 302–5
      plankton derived 308
      plant derived 306–7
      sewage derived 308
      total budget 308–9
  food webs 226–8, 231, 232, 238–40
Carbon isotopic analysis
  methods of analysis
    chemistry 263–4
    sampling 261–2
  results
    dissolved carbon 266–72
    sedimentary carbon 276–7
    sinking carbon 274–6
    suspended carbon 272–3
  results discussed
    basin and ocean compared 284–6
    C : N ratios 283–4
    isotopic gradients 280–2
    phase interrelationships 283
    sedimentary organic matter 282–3

terrestrial phases 277–80
Carbon isotopic measurements
environmental signatures 256–9
photosynthesis 128–32
Carbon *see also* DOC *also* POC
Carnivory in zooplankton 198–9, 212–5, 217–8
Chlorophyll measurement 143
CZCS 121–6
ship surveys 127
Chromium emissions 338, 342, 345
Current patterns
introduction 39–44
methods of recording 44–7
results 48–9
results discussed
flow fields
cross isobath structure 81–2
environment 69–70
fluctuations
generation mechanisms 90–102
statistical analysis 82–90
horizontal structure 70–8
reference section 70
particle trajectories 102–7
residence times 109
time effects 107–8
topographic effects 108
vertical shear effects 108–9
seasonal factors 61–9
velocity field characteristics 50–6
wind field 56–61
summary of data 109–13

Depth effects
organic carbon flux 294–5
particle flux 181–4
Detritus in food webs 227, 230–2, 236, 237, 238–40
Dissolved organic carbon *see* DOC
Distributary channels 19
DNA synthesis 322–3
DOC 266–72
isotopic signature 257
relation to food webs 227, 230–2, 236, 237, 238–40
relation to POC 155–7
Dover sole isotopic signature 259
Dume fan 19

Empirical orthogonal eigenfunction (EDF) 82
Eolian sediment transport 12

Fecal carbon production 198–9
methods of measurement 201–2
modelling 202–3
results 210–12
results discussed 212–18
Feldspar 11
Flocculants, isotopic signature of 258
Flood sediment discharge 11
Fluvial sediment transport 10–12
Food web modelling
method 225–6, 245–51
results
one-layer model
adjustments for growth 229
C : N ratio 229
carbon flow 226–8, 231, 232, 238–40
model constraints 228–9
model sensitivity 228
nitrogen flow 227, 228, 231, 232, 238–40
tracer dynamics 229
two-layer model 235
three-layer model 235–7
results discussed 237–43

Gaviota Creek sediments 11
Geochemistry
surface sediments 300–2
suspended sediments 295–300
Geopotential anomaly 74–6
Gut pigment study 199–200

results 204–9

Heavy metals *see* metal pollutants
Herbivory in zooplankton 198–9, 212–15, 217–18
Hopane distribution 298, 303
Hueneme–Mugu fan 18–19
Humic acid isotopic signature 257, 258

Illite 11
Inverse analysis methods 225, 245–51
Iron in porewater 325
Isotopic signatures 256–9

Kaolinite 11
Kelp isotopic signature 259
Kerogen isotopic signature 257–58

Lead emissions 338, 342, 345
Lead isotope studies 357
  sediment 369, 372, 373, 385–9
  water 361, 363, 381–2
Light attenuation and bacteria 162–3
Lipid composition and organic carbon flux 296, 300

Manganese in porewater 325
Mass movement 6–7
Mathematical modelling *see* modelling
Mesozoa in food webs 227, 230–2, 236–40
Metal pollutant fluxes
  introduction 337
  methods of measurement
    chemical analysis 339–40
    dating 340
    sampling 339
  results
    environmental pathways 347–9
    profiles 341, 342
    spatial variation 341–7
  results discussed 349–50
Microbial metabolism measurement
  methods
    benthic flux chamber use 318
    microbial incubation 317
    porewater analysis 317–18
    sampling 315
    sediment analysis 317
  results
    ATP concentration 318–20
    DNA synthesis 322–3
    TOC 321
  results discussed
    biomass production 325–8
    respiration efficiency 328–30
Microzoa in food webs 227, 230–2, 236–40
Modelling
  fecal production rate 202–3
  food webs
    method 225–6, 245–51
    one-layer model
      adjustments for growth 229
      C : N ratio 229
      carbon flow 226–8, 231, 232, 238–40
      model constraints 228–9
      model sensitivity 228
      nitrogen flow 227, 228, 231, 232, 238–40
      tracer dynamics 229
    three-layer model 235–7
    two-layer model 235
Montmorillonite 11
Municipal outfalls compared 344

Nepheloid flow 5–6
New production
  defined 138
  measured 143
Nitrates 135, 136–8, 143
  isotopic signature 257
  new production 138–42
Nitrogen flow in food webs 227, 228, 231, 232, 238–40

Nitrogen flux 181–4
Nitrogen isotopic analysis
  methods of analysis
    chemistry 263–4
    sampling 261–2
  results
    sinking nitrogen 274–6
    suspended nitrogen 272–3
  results discussed
    basin and ocean compared 284–6
    C : N ratios 283–4
    isotopic gradients 280–2
    phase interrelationships 283
    sedimentary organic matter 282–3
    terrestrial phases 277–80
Nitrogen isotopic signatures 256–9
Nutrient measurements 135

Organic carbon
  concentration 321
  dissolved 266–72
  particulate 272–6
  sedimentary 25, 276–7, 282–3
  see also DOC *also* POC
Organic carbon flux studies
  methods 293–4
  results
    depth factors 294–5
    geochemistry
      surface sediment 300–2
      suspended sediment 295–300
  results discussed
    carbon budget 305
      plankton derived 308
      plant derived 306–7
      sewage derived 308
      total budget 308–9
    trap : surface sediment balance 302–5
Oxnard Shelf sediments 17

^{32}P and ^{33}P isotopes 136
Palos Verdes slope failure 7
Particle flux studies
  methods
    sample processing 172–3
    trap design 169–71
    trap operation 171–2
  results
    carbon flux 177–8
    depth effects 181–4
    nitrogen flux 177–8
    phaeopigment flux 177
    seasonal effects 186
    silica flux 177
    trap array type 175–7
    trap design evaluation 179–80
    trap effectiveness 173–5
  results discussed
    accumulation rate 189–91
    protocol effects 187–9
    seasonality 191–3
Particulate organic carbon see POC
Particulate organic nitrogen see PON
Petroleum and organic phases 280–1
pH, porewater estimates 325
Phaeopigment flux 177, 181–4
Phosphorus isotopes 136
Photosynthetic production 143
  ^{14}C measures 128–32
  optical measures 133–4
Phytoplankton, isotopic signature 256
Pigment and fecal production
  methods of measurement 201–2
  modelling 202–3
  results 204–9
Plankton and carbon budget 308
Plate tectonic setting 3
Plutonium isotope studies 357
  sediment 369–73, 385–9
  water 361, 363, 379–80
POC
  isotopic signature 257
  relation to bacteria 152–4
  relation to fecal production
    measurement 201–2
    modelling 202–3
    results 210–12
    results discussed 212–18

sinking 274–6
suspended 272–3
transition to DOC 155–7
Polonium isotope studies 357
sediment 369, 372, 373, 385–9
water 361, 363, 383–4
PON
sinking 274–6, 283–4
suspended 272–3
Porewater analysis 317–18, 325
Prawns, isotopic signature of 259
Production measures
methods of measurement 138–9
results 139–41
control volume data 145
nitrate concentration effects 142–3
nutrient disappearance 145–6
residence time effects 144–5
timescale effects 144
upwelling effects 141–2
Protozoa in food webs 227, 230–2, 236–40

Radiography and sediment structure 27
Radionuclide fluxes
methods of analysis
replication 359
sampling 355–7
sediment measurements 358–9
water monitoring 357–8
results
sediment samples 361
water samples 360
results discussed
flux rates 368–74
temporal variations 362–8
Redondo Fan 19
Regenerated production, defined 138
Residence times 109, 144–5
Ridgeback prawns, isotopic signature of 259

Salinity measures 143
San Gabriel River 11
Santa Ana River 11
Santa Ana winds 127
Santa Clara River 10, 12
Seasonal variations
currents 61–9
particulate flux 186, 191–3
radionuclide concentrations 363
zooplankton distribution 206–9, 215–18
Sediment traps
array types compared 175–7
design 169–71
design evaluation 179–80
effectiveness 173–5
operation 171–2
Sediments
accumulation rate 29
anoxia 29–31
bulk density 28
calcium carbonate content 24–5
depositional environment
basin 18–19
distributary lobes 19–20
shelf 16–17
slope 17–18
organic carbon content 25
sampling methods 21–2
sources 9–10
advection 12–13
aeolian 12
biogenic 12
fluvial 10–12
structures 27
texture 22–4
transport
pathways 20–1
processes 5–7, 13
volumes 14–16
Seismic profile, Santa Monica Basin 17
Sewage
flocculants 277–80
heavy metal concentrations *see* metal pollutants
input and organic carbon flux 308
Shelf sedimentation 16–17
Silica flux 177, 181–4
Slopes

characteristics 9
sediments 16–17
Southern California Countercurrent 39
Southern California Eddy 39
Spectral analysis 82
Spectral attenuation and bacteria 162–3
Sterol fluxes 296, 299
Sulfate in porewater 325
Surface reactivity and bacteria 159–62

Temperature measures 143
Textural studies 22–4
Titration alkalinity 324, 325
Topographic characteristics 39–43
Turbidity currents 6

Upwelling and production 141–2

Velocity vectors
seasonal variation 62–3
water 51, 53–6
wind 57–9
Ventura River 12

Wind effects on currents 56–61

Zinc emissions 338, 342, 345
Zooplankton, isotopic signature 256, 259
Zooplankton and fecal carbon
introduction 198–9
methods
biomass 199
gut measurements
evacuation rate 200–1
pigment 199–200
sampling 199
results
biomass 204
gut measurements
C : pigment ratio 206–9
evacuation rate 206
fecal production 210–12
pigment concentration 204–5
results discussed
carnivory *versus* herbivory 212-15
seasonal factors 215–18
